

Tanja says: thanks to the people who took notes!!!

Please help in taking notes

You can download them with the icon on the right

The link for the zulip chat is here

[censored]

Check Canvas/ELO for the linn.

Homework is submitted in groups of 2 or 3. Submit homework by email, with cc to your teammates

There is 1 email address for all TAs, so sadly no PGP.

Course homepage:

<https://www.hyperelliptic.org/tanja/teaching/crypto20/>

Homework is not mandatory, but morally right to do and counts for at most 1 bonus point.

For Eindhoven students, the bonus point counts *without* having to score at least 6 on the exam. So a 5 as a final exam grade is fine. (Applies to RU students as well (i don't think so, only if you get a minimal of 6))

Take care of everyday paranoia. :-)

The first homework sheet is posted on Thursday the 3rd of Sep and the deadline is the Thursday after.

Time will be on the sheet, but before 10.45.

Tanja and many students love LaTeX.

All programming languages are ok but some of them are less nice. Python & Sage are ok.

Pari GP is recommended as that's what will be available on exam laptops.

<https://pypi.org/project/cypari2/>

Video lectures:

<http://videocollege.tue.nl/Mediasite/Catalog/catalogs/Cryptology>

Please watch the videos before the lecture so that we can jump right into the subject.

I'll post some notes after the Q&A sessions and then also post what I expect you to learn before the next session.
